Description: The Mystic was born from the need for a 9mm silencer to be able to be used on a host of other calibers. People had needed a silencer that could be taken apart for cleaning as well as strong enough to handle fairly powerful loads to make it versatile. We also felt it needed to be able to mount to various platforms so we made it adaptable to industry standard modules. This has created one of the most popular multipurpose suppressors of all time! By design, the Mystic works VERY well on 22 rimfire guns as well as 9mm and can handle rounds as powerful as 5.56 NATO and 7.62x39mm all in one package. This simplifies the NFA process and lowers the cost of the tax stamps needed for the budget minded user. The Infiniti is a natural evolution of this platform in that we went to a titanium core to reduce weight for pistol use. Some people prefer the lighter weight and ultra high levels of suppression on their 9mm host platform over the extra calibers that the Mystic offers. If you are in this group then the Infiniti is for you!
