Description: The Freedom series of suppressors is the result of ongoing research and development here at Liberty Suppressors. These units use the innovative square bore technology that we developed for our Pandora line of suppressors to generate there incredible levels of suppression. These suppressors mount with two schemes for better accuracy and repeatability. These suppressors produce world class suppression in excess of 31db and are lighter weight than most suppressors in the same class. Each suppressor is furnished with a Libertygear mirage cover to reduce mirage while shooting long range.
